

Giri Sai Chaitanya Bheemisetty

Quality Assurance Test Engineer

Tampa, FL | (813) 812-5512 | girisaichaitanya@hotmail.com | LinkedIn

Summary

Quality Assurance Automation Test Engineer with 4+ years of experience delivering scalable enterprise web applications. Experienced in building Selenium-based UI automation frameworks with Java and TestNG, designing API automation with REST Assured, and integrating tests into CI/CD pipelines using Jenkins and GitHub Actions. Skilled in BDD, shift-left testing, database validation, cross-browser testing, API mocking, and performance testing (JMeter), ensuring reliable releases and reducing regression cycles. Collaborative Agile team player focused on framework design, continuous testing, and improving overall product quality.

Education

Master's in Computer Science | *University of South Florida*

Skills

Test Automation & Frameworks: Selenium WebDriver, TestNG, Cucumber (BDD), Playwright, Cypress, REST Assured, Postman, Page Object Model (POM), Apache JMeter, Data-Driven Testing, Test Automation Framework Design

Programming & Scripting: Java (8/11), SQL, Python, JavaScript (basic), JSON, XML, TypeScript

API & Backend Testing: RESTful API Testing, Request/Response Validation, OAuth 2.0, JWT Authentication, JSON Schema Validation, API Mocking, Newman CLI, Microservices Testing, Backend Integration Testing, Build Verification Testing (BVT)

Performance & Non-Functional Testing: Apache JMeter, Load Testing, Stress Testing, Scalability Testing, Performance Monitoring, Throughput & Response Time Analysis, Bottleneck Identification, Test Result Analysis, Continuous Testing

CI/CD & DevOps: Jenkins, GitHub Actions, Git, Maven, CI/CD Pipeline Integration, Automated Test Execution

Cloud & Databases: AWS (EC2, S3), Azure DevOps, PostgreSQL, MySQL, Oracle, Database Testing, SQL Query Validation, Data Integrity Verification, Backend Data Validation, Cloud-based Test Execution, Cross-Environment Testing

Test Management & Defect Tracking: JIRA, Zephyr, TestRail, Confluence, Defect Lifecycle Management, Root Cause Analysis, Test Metrics & Reporting, Traceability Matrix (RTM), User Story Validation, Acceptance Criteria Review

Testing Types & QA Practices: Functional Testing, Regression Testing, Smoke & Sanity Testing, System Testing, UAT Support, Cross-Browser Testing, Cross-Platform Testing, Shift-Left Testing, Risk-Based Testing

Agile & SDLC Methodologies: Agile Scrum, SDLC, Sprint Planning, Daily Stand-ups, Backlog Grooming, Retrospectives

Professional Experience

QA Automation Engineer | McKinsey & Company

Sep 2024 – Present

- Architected and maintained a scalable Selenium WebDriver UI automation framework in Java and TestNG with Page Object Model, reducing flaky tests and increasing regression coverage by 45% across enterprise web applications
- Developed API automation suites using REST Assured and Postman, including JSON schema validation, OAuth authentication, and backend integration verification, reducing production defects by 42%.
- Defined and integrated automated tests into Jenkins and GitHub Actions CI/CD pipelines, enabling continuous smoke and regression testing on pull requests and cutting manual verification effort by 60%.
- Led BDD automation using Cucumber (Gherkin) with TypeScript, integrating Cypress for end-to-end workflows, improving requirement traceability and collaboration with Product Owners and Developers.
- Executed cross-browser and cross-platform testing with Selenium Grid and BrowserStack across Chrome, Firefox, Edge, and Safari, preventing 35% of browser-specific production issues.
- Performed database validation and backend testing using SQL (PostgreSQL/MySQL) and log analysis, collaborating with Agile teams to implement shift-left testing and early defect detection.

QA Engineer | Avenir Technologies

Mar 2019 – Jul 2022

- Built and maintained end-to-end automation frameworks using Python, Selenium WebDriver, PyTest, and data-driven patterns, reducing regression execution time by 65% and accelerating release cycles.
- Developed API automation suites with REST Assured and Postman, validating RESTful endpoints, request/response payloads, and authentication flows, cutting API-related production defects by 50%.
- Designed and executed performance and load tests with Apache JMeter, analyzing throughput, response times, and error rates to identify bottlenecks and improve application scalability by 35%.
- Integrated automated tests into Jenkins CI pipelines with parallel execution and automated reporting, enabling continuous smoke and regression testing and reducing unstable deployments by 22%.
- Collaborated in Agile SDLC to define test scenarios, leverage Playwright with TypeScript, and generate HTML/JSON reports, supporting shift-left testing and early validation of business requirements.
- Performed functional, regression, UAT, and database testing using SQL (Oracle/MySQL), managing defects via JIRA and Zephyr, improving defect resolution turnaround time by 40%.
